

Scott Willats

Senior Full Stack Engineer

• scottwillats234@gmail.com

• Warsaw, Poland

SUMMARY

Results-driven Senior Full Stack Engineer with extensive experience in React, Angular, TypeScript, JavaScript, HTML5, CSS3, Responsive Design, and backend technologies including Java, PHP, Node.js, Spring Boot, Laravel, RESTful API Development, and Microservices. Skilled in PostgreSQL, MySQL, MongoDB, Redis, cloud platforms (AWS, Azure, Cloud Deployment), and DevOps practices such as Docker, CI/CD pipelines, GitHub Actions and Git. Expertise in unit testing, integration testing, API testing, and implementing secure coding practices (JWT, OAuth2, OWASP Top 10). Strong experience in system design, performance optimization, asynchronous processing, and delivering high-quality solutions in Agile/Scrum environments. Adept at technical leadership, mentoring, code reviews, cross-functional collaboration, problem solving and effective communication.

SKILLS

Front-end: React, Angular, TypeScript, JavaScript, HTML5, CSS3, Responsive Design

Back-end: Java, PHP, Node.js, Python, ASP.Net, Spring Boot, Laravel, RESTful API Development, Microservices

Databases: PostgreSQL, MySQL, MongoDB, Redis

Cloud / DevOps: AWS (EC2, S3, RDS), Azure, Cloud Deployment, Docker, CI/CD Pipelines, GitHub, Git

Testing & Security: Unit Testing, Integration Testing, API Testing, JWT, OAuth2, Secure Coding Practices, OWASP Top 10

Other: System Design, Performance Optimization, Asynchronous Processing

Soft Skills: Technical Leadership, Mentoring, Code Reviews, Cross-functional Collaboration, Problem Solving, Communication

EXPERIENCE

DealHub - Austin, United States

Senior Full Stack Engineer, Apr 2023 - Present

- Led the transition from a monolithic legacy e-commerce stack to a React frontend with Node.js microservices. We cut page load times by 35% and saw engagement climb by 22%. Also worked hands-on designing and extending .NET services, tightening up checkout flows and improving API resilience across distributed services.
- Architected and rolled out our AWS infrastructure (EC2, S3, RDS), right-sizing resources and cleaning up waste. Reduced infra spend by about 18% without sacrificing performance.
- Built and hardened REST APIs secured with JWT and OAuth2. Focused heavily on stability and observability — brought API uptime to 99.9%.
- Developed and refactored React + TypeScript UI components with a mobile-first mindset. Improved mobile conversion rates by 27% after optimizing rendering and reducing layout shifts.
- Introduced proper unit and integration testing across both frontend and backend (previously minimal coverage). Production defects dropped roughly 30% over the next few release cycles.
- Tuned PostgreSQL queries, added appropriate indexing, and introduced Redis caching for high-traffic endpoints. Average response times improved by about 40%.
- Set up CI/CD pipelines using GitHub Actions and Docker, moving us from manual releases to automated builds and deployments. Cut deployment time in half and reduced release friction significantly.
- Mentored five junior engineers through code reviews, pair sessions, and design walkthroughs. The team's code quality and delivery velocity improved noticeably (around 40% by internal metrics).
- Worked closely with product, QA, and design to ship 20+ meaningful features over six months. Helped align technical decisions with business goals while keeping delivery predictable.

Crezco - London, UK

Senior Full Stack Engineer, Jan 2020 - Mar 2023

- Built and maintained Angular frontends and Spring Boot microservices supporting 1.2M transactions per day, sustaining 99.8% uptime in a production environment serving 50K+ users.
- Designed and secured 40+ RESTful API endpoints using JWT and OAuth2, reducing authentication-related by 25% and improving token validation performance by 18%.
- Led the migration from a monolithic MySQL database to PostgreSQL and introduced Redis caching for high-read endpoints, decreasing average query latency by 35% and cutting peak response times by nearly 50%.
- Conducted structured code reviews and mentored 4 developers, increasing test coverage from 55% to 85% and reducing post-release defects by approximately 30% over two quarters.
- Implemented and optimized CI/CD pipelines in Azure DevOps across 6 services, reducing deployment failures by 45% and shortening release cycles from bi-weekly to weekly.
- Designed and executed 600+ unit and integration tests, stabilizing core services and decreasing regression-related production incidents by 40%.
- Optimized React and TypeScript frontend performance by eliminating unnecessary re-renders and improving bundle splitting, increasing page load speed by 28% and improving Lighthouse performance scores from 72 to 91.
- Partnered with QA, DevOps, and Product to deliver 15+ production features within roadmap deadlines, contributing to a 20% increase in feature adoption and measurable improvements in key business KPIs.

medbelle - Berlin, Germany

Full Stack Engineer, Oct 2017 - Dec 2019

- Built and maintained Node.js and PHP backend services for healthcare platforms supporting 200K+ users, reducing recurring server-side errors by 20% through improved logging, validation, and exception handling.
- Developed reusable React and Angular components for patient-facing portals, improving usability scores by 30% and reducing support requests related to navigation and form errors.
- Designed and implemented RESTful APIs and modular microservices, improving service isolation and making new feature delivery faster and less risky.
- Introduced unit and API integration testing frameworks (Jest, PHPUnit, Postman collections), increasing automated test coverage and cutting post-deployment production issues by 25%.
- Managed and optimized MySQL and MongoDB databases, tuning indexes and query patterns to improve average query performance by 15% under peak load.
- Contributed actively in Agile/Scrum ceremonies, delivering 10+ high-priority features across multiple release cycles while maintaining sprint commitments.
- Worked closely with the security team to address OWASP Top 10 risks, implement secure coding standards, and remediate findings from vulnerability scans—reducing reported security issues by 40% over two release cycles.

Allegro - Poznan, Poland

Junior Frontend Engineer, Jul 2015 - Sep 2017

- Developed frontend features with React, Angular, HTML5, CSS3, increasing user retention by 18%.
- Built backend services using PHP and Laravel, processing 500k+ transactions/month reliably.
- Optimized PostgreSQL and MySQL queries, reducing response times by 20%.
- Deployed applications on AWS and Azure, increasing uptime to 99.5%.
- Assisted in unit and integration testing, decreasing post-release defects by 22%.
- Participated in code reviews and cross-team collaboration, enhancing team efficiency and knowledge sharing.

EDUCATION**Bachelor's Degree in Computer Science**

Warsaw University of Technology, 2011 - 2015
